ABOUT ME

Young and passionately IT driven. An eye for detail and a dedicated attitude throughout my education, which I am keen to apply to the business world. My immediate aim is to apply and develop my intellect and IT programming skills, while acquiring the practical work experience.

IT PROGRAM & SOFTWARE EXPERIENCE

- HTML
- CSS
- Bootstrap
- Windows OS
- Microsoft Office
- Bash/Shell
- Ruby
- JavaScript
- jQuery
- Adobe software

To gain knowledge and skills with these program languages I took extensive online courses, such as [Codecademy](#) and [edX](#), in parallel with my studies. I also gained further skills about creating applications and programs through online video tutorials, which helped me familiarise myself with using these programming languages in real-life situations.

WORK EXPERIENCE

[Mvine Ltd](#), London | Sep 16 – Mar 17 | Internship

During my 6-month internship in Mvine, I worked part-time during my last year in 6th Form. I reported directly to the [Head of Operations](#) and was given daily and weekly tasks of prototyping front end websites, proof-reading and updating user guides, and general office/admin work. I was also involved with client meetings – on-site and external – where I was in charge of taking meeting minutes, along with action points and timelines.

EDUCATION

[Queensbury Academy](#) – 6th Form

Sep 15 – Jul 17

A-Levels: Art (D) | Product Design (E) | Economics (E)

[Queensbury Academy](#) – Secondary

Sep 10 – Jul 15

7 GCSEs: Maths (C) | English (C) | Science (C)

PERSONAL INTERESTS

Outside of school, one of my interests is PC video games. This is one of the things that initially inspired me to take on programming and coding because as I grew older, I started thinking about how all these characters, environments and other objects interact with each other.

Furthermore, I also enjoy outdoor activities such as playing rugby but most importantly going on hikes. This is because I think it is important to be around nature and away from the busy urban areas from time to time. Also from an art and design perspective, many inspirations can be drawn from nature. This helped me make progress on designs I was working on throughout my studies because seeing some things up close is a lot different than using their appearance from a photograph.

My main inspirations include Elon Musk (IT) and Bob Ross (Art).
